This video demonstrates how to install Google reCAPTCHA using php in just a few easy steps. For the code used in this video, use the link below. Like and comment if you found this video useful!

Steps:
http://makingspidersense.com/tutorial...

Example:
http://makingspidersense.com/tutorial...
(change the extension to .php)

Pro Tip: To make it work on just one page, look into using $_SERVER['REQUEST_METHOD'] == 'POST' in an if/else statement to determine whether the page has been submitted. (sorry, I didn't talk about this in the video)

ⓘ Adding reCAPTCHA to your site

Read the setup instructions or view this site on a larger screen.

▾ Keys

Site key
Use this in the HTML code your site serves to users.

```
6Lf30HUUAAAAAAWjfxXXrGsgW7SeXE5EAbcT59f
```

Secret key
Use this for communication between your site and Google. Be sure to keep it a secret.

```
6Lf30HUUAAAAAIgR13kL6Nke9GheSqhk3ZQ33Y-W
```

▾ Step 1: Client side integration

Paste this snippet before the closing </head> tag on your HTML template:

```
<script src='https://www.google.com/recaptcha/api.js'></script>
```

Paste this snippet at the end of the <form> to create a button protected by reCAPTCHA. You will need to create a callback function to handle the result.

```
<button
    class="g-recaptcha"
    data-sitekey="6Lf30HUUAAAAAAWjfxXXrGsgW7SeXE5EAbcT59f"
    data-callback="YourOnSubmitFn">
  Submit
</button>
```

The reCAPTCHA documentation site provides more details and advanced configuration options.
